ABDUL QUDDOUS

Senior AI Engineer

Karachi, Pakistan | +92 300 0000000 | abdul.quddous@email.com | linkedin.com/in/abdulquddous | github.com/abdulquddous

PROFESSIONAL SUMMARY

Senior AI Engineer with 5+ years of experience building and training machine learning and deep learning models and integrating them into production AI services. Strong background in Natural Language Processing (NLP), model training, evaluation and deployment, with hands-on experience building Retrieval-Augmented Generation (RAG) systems. Comfortable owning an AI feature end to end — from data preparation and model training through to API integration, deployment and monitoring.

CORE SKILLS

Machine Learning: Machine Learning, Deep Learning, model training, evaluation and tuning, feature engineering, supervised and unsupervised learning

NLP: Natural Language Processing (NLP), text classification, named entity recognition, embeddings, transformer models, tokenization

Generative AI: Retrieval-Augmented Generation (RAG), prompt engineering, vector search, LLM integration and fine-tuning

Frameworks: PyTorch, TensorFlow, Hugging Face Transformers, scikit-learn, LangChain

AI Integration: REST API design for AI services, model serving, inference optimisation, vector databases (FAISS, Pinecone)

Languages & Tools: Python, SQL, Git, Docker, Jupyter, MLflow

Cloud & MLOps: AWS / GCP for training and deployment, CI/CD for ML, model versioning and monitoring

Practices: Agile / Scrum, experiment tracking, A/B testing, technical documentation, cross-team collaboration

PROFESSIONAL EXPERIENCE

Senior AI Engineer | Company Name, Karachi *2023 – Present*

- Lead model training and AI integration for production AI services, owning the pipeline from data preparation through deployment.
- Design and train deep learning and NLP models for text classification, entity extraction and semantic search, improving accuracy and reducing inference latency.
- Built a Retrieval-Augmented Generation (RAG) pipeline combining a vector database with an LLM, improving answer relevance for a production AI assistant.
- Integrated trained models into backend services through REST APIs, working with engineering to handle scaling, caching and monitoring.
- Mentor junior engineers on model training workflows, evaluation methodology and experiment tracking.

AI / Machine Learning Engineer | Company Name, Karachi *2021 – 2023*

- Trained and evaluated machine learning and deep learning models for NLP use cases including classification, summarisation and search relevance.
- Built data preprocessing and feature engineering pipelines for structured and unstructured text data.
- Integrated AI models into existing products through internal APIs, working closely with backend and product teams.

- Ran systematic experiment tracking and A/B tests to compare model versions before production rollout.

Machine Learning Engineer | Company Name, Karachi *2020 – 2021*

- Built and trained baseline machine learning and deep learning models for early NLP and classification projects.
- Prepared and cleaned training datasets, and implemented evaluation metrics and reporting for model performance.
- Supported deployment of trained models into internal tools with Docker and REST APIs.

SELECTED PROJECTS

RAG-Based Knowledge Assistant | Python, LangChain, FAISS, Hugging Face

- Retrieval-Augmented Generation system over internal documentation, combining embedding search with an LLM to answer natural-language questions.

NLP Text Classification Service | PyTorch, Transformers, FastAPI

- Trained and deployed a transformer-based NLP model as a REST service for automatic ticket and document classification.

EDUCATION

Bachelor of Computer Science | University Name *Year – Year*

Relevant coursework: Web Technologies, Data Structures and Algorithms, Software Engineering, Human-Computer Interaction.

ADDITIONAL

Languages: English (professional), Urdu (native)
